Abstracts

A Hot Runner Injection Molding System is an advanced technology used in plastic injection molding that maintains the plastic material in a molten state within heated components, such as nozzles and manifolds, until it is injected into the mold cavity. Unlike traditional cold runner systems, hot runners eliminate the need for runners (channels) that solidify and must be removed and recycled, thus reducing waste and cycle times. This system enhances efficiency, improves the quality of the molded parts by ensuring consistent temperature and flow, and allows for complex mold designs. Hot runner systems are widely used in industries such as automotive, consumer goods, electronics, and medical devices for producing high-precision, high-volume plastic components.

The global Hot Runner Injection Molding System market size was estimated at USD 3250.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
