Abstracts

Hotel Contactless Check-in Software is a digital solution designed for the hospitality industry to enable hotel guests to complete the check-in process without in-person interaction with front desk staff. It typically integrates with hotel property management systems (PMS) and supports multiple access channels such as mobile apps, WeChat/Alipay mini-programs, or self-service kiosks. Functions include pre-arrival information submission (ID verification, room preference selection), digital key issuance, deposit payment, and electronic invoice generation, aiming to streamline the check-in workflow, reduce guest waiting time, and enhance hygiene safety and service efficiency. The digital transformation of global travel and hospitality has driven the rapid adoption of contactless check-in software. Post-pandemic, user demand for safe and fast check-in has permanently increased. Cloud deployment, PMS integration, and mobile compatibility have become key competitive advantages.
