Abstracts

A hotel self-service check-in system is a solution that integrates information technology and automated equipment, allowing guests to complete check-in procedures without the assistance of front desk staff. Through this system, guests can use touch screen terminals, mobile applications, or hotel websites to select rooms, confirm reservation information, verify identity, and pay fees. At the same time, they can also receive electronic room cards or unlock the door through their mobile phones, achieving a fast and convenient check-in experience. The system is designed to improve service efficiency, reduce waiting times, and enhance customer satisfaction. The development trend of hotel self-service check-in systems is moving towards greater intelligence, personalization, and seamless integration. In the future, these systems will increasingly leverage artificial intelligence and machine learning technologies to anticipate customer needs and provide a customized service experience. Furthermore, with the development of the Internet of Things, self-service check-in devices will further interconnect with other hotel facilities (such as smart door locks and room control systems), creating a comprehensive smart stay experience for guests. Furthermore, the use of contactless technology and biometric security measures (such as facial or fingerprint recognition) will become more prevalent to enhance safety and hygiene standards. Finally, mobile technology will continue to be a key focus, allowing guests to complete all steps from booking to check-out using their smartphones, achieving truly convenient and efficient service.

The global Hotel Self Check-in System market size was estimated at USD 1682.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
