Report Overview

A Human Milk Bank Management system is a comprehensive and specialized software solution designed to streamline the collection, storage, and distribution of donor human milk. This system is crucial for ensuring the safety, quality, and traceability of breast milk provided to infants in need, particularly those in neonatal intensive care units (NICUs). The product encompasses a range of functionalities, including donor screening and qualification, milk collection tracking, laboratory testing results management, and inventory control. It also facilitates the documentation of milk usage, ensuring that every drop of milk can be traced from the donor to the infant.
