### Report Overview

A trolley-mounted anesthesia workstation with respiratory monitoring is a specialized medical device designed to deliver precise anesthetic gases and monitor patients' respiratory parameters during surgical procedures. These systems integrate ventilation, gas delivery, and real-time respiratory monitoring (such as capnography, spirometry, and oxygen concentration analysis) into a mobile unit, enhancing flexibility in operating rooms and intensive care settings. The workstation ensures accurate anesthesia administration while continuously tracking vital respiratory data, improving patient safety and procedural efficiency. Its trolley-based design allows for easy repositioning, making it suitable for dynamic clinical environments where space and accessibility are critical factors.
