Report Overview

The speed reducer is a widely used component in the mechanical industry, connecting and harmonizing the power source and the execution mechanism. Its core indicators include the reduction ratio, transmission efficiency, accuracy, and lifespan. Compared with traditional speed reducers, harmonic drives have a simple structure, which makes them small in size and has a large transmission ratio; they are suitable for small joint scenarios in robots. Harmonic Reducers operate based on the principle of tooth engagement between the rigid wheel and the flexible wheel. Generally, the flexible wheel has two fewer teeth than the rigid wheel. By adjusting the relative number of teeth between the flexible wheel and the rigid wheel, different transmission ratios can be obtained.

The global Humanoid Robot Reducer market size was estimated at USD XX million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of XX% during the forecast period.
