Report Overview

HVAC Components refer to the various individual parts and systems that collectively make up a Heating, Ventilation, and Air Conditioning (HVAC) system. These components work together to provide thermal comfort and maintain indoor air quality in residential, commercial, and industrial buildings. The primary components include the heating system, cooling system, ventilation system, and air distribution system. The heating system typically involves a furnace or boiler, while the cooling system may consist of an air conditioner or heat pump. Ventilation systems are responsible for providing fresh air and removing stale air, which can be achieved through air intakes, exhaust fans, and air filters. The air distribution system, on the other hand, involves ductwork and vents that circulate conditioned air throughout the building. Additional components may include thermostats, humidifiers, dehumidifiers, and air purifiers, all of which contribute to the overall functionality and efficiency of the HVAC system.
