Abstracts

An HVAC Variable Refrigerant Flow (VRF) system is a modern, highly efficient air conditioning system that provides both cooling and heating functions. It achieves different air conditioning needs for multiple zones in one system by using variable refrigerant flow technology to control the temperature and humidity of different indoor units. A VRF system consists of a central condenser and multiple indoor units. Condensers are usually installed outdoors, while indoor units are installed in rooms that need to be cooled or heated. Each indoor unit has its own controller, the temperature and humidity can be adjusted through the controller, and it can operate independently according to the needs.
