## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hybrid Battery Busbar competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hybrid Battery Busbar is a specialized high-voltage interconnect within Electric Vehicle battery packs, responsible for efficiently and safely collecting high current generated by battery cells or modules, while integrating power transmission and signal acquisition functions. In 2024, the global production volume of Hybrid Battery Busbars was 79.20 million units, and the average price was \$25/unit. The 2024 annual production capacity per single line was approximately 2,000 units, and the average gross margin was approximately 29%. The Hybrid Battery Busbar supply chain consists of Upstream, Midstream, and Downstream segments. The Upstream segment mainly provides high-purity copper and aluminum materials, high-performance insulation films, and temperature sensors, with top supplier representatives including Aurubis, Rogers Corporation, and TDK Corporation; the Midstream segment focuses on the precise lamination, laser welding, insulation encapsulation, and quality control of busbar products; the Downstream market covers the manufacturing of new energy vehicles, specifically including Pure Electric Vehicles and Plug-in Hybrid Electric Vehicles, with top Downstream company representatives being Tesla, BMW, and BYD. With the strong growth of the global Electric Vehicle market and rising demands for range and charging speed, the technical importance of the Hybrid Battery Busbar, as a core connector in high-voltage, high-power battery packs, is increasingly evident. The widespread adoption of high-voltage platforms (800V and above) imposes stringent requirements on the busbar's lightweight design, integrated sensing functions, and thermal management capabilities. This trend of technological advancement will significantly increase the busbar's added value and average selling price, coupled with the sustained increase in

production volume of Pure Electric and Plug-in Hybrid Electric Vehicles, ensuring the Hybrid Battery Busbar market has a clear and high-growth long-term outlook.

The global Hybrid Battery Busbar market size was estimated at USD 1980.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.00% during the forecast period.
