Report Overview

A Hybrid Propulsion Boat is a type of marine vessel that employs a combination of propulsion systems to achieve optimal performance, efficiency, and environmental sustainability. This innovative design integrates both traditional internal combustion engines and electric motors, allowing the boat to switch between or utilize both power sources simultaneously. The primary goal of a hybrid propulsion system is to reduce fuel consumption, lower emissions, and enhance overall operational efficiency. By leveraging the benefits of both engine types, hybrid propulsion boats can offer superior maneuverability, reduced noise and vibration, and the ability to operate in environmentally sensitive areas with zero emissions when running solely on electric power. This technology is particularly advantageous for applications such as tourism, transportation, and recreational boating, where both performance and environmental considerations are critical.
