### Report Overview

A shearing machine is a type of industrial equipment with rotational circles and cutting edges which help to cut hard iron sheets and metal bars. The shearing intends to apply a high-pressure device on a metal bar once to expel a part of the metal. Every metal shear utilizes a similar procedure in cutting where there are a fixed upper blade, a lower edge and an adjustable clearance isolating the two. Linear shearing machines are used to cut metal with a thickness of more than 2mm, and they are worked with Hydraulic power or hand operated tools for thinner metals. Circular shearing machines are utilized to cut circular blanks and rings from metal and are operated by an electric moto
