Report Overview

A hydro and vacuum excavation truck is a specialized piece of equipment used in construction and utility maintenance for non-destructive digging. This excavation truck combines the capabilities of high-pressure water (hydro) and a vacuum system to safely and precisely excavate soil, debris, or other materials around sensitive underground utilities. The hydro excavation component uses pressurized water to break up the soil, creating a slurry that is then extracted by the vacuum system into a debris tank. This process allows for accurate excavation without damaging nearby pipes, cables, or other underground infrastructure.
