### Report Overview

A hydro and vacuum excavator is a specialized piece of equipment used in construction and utility maintenance for non-destructive digging. This excavator combines the capabilities of high-pressure water (hydro) and a vacuum system to safely and precisely excavate soil, debris, or other materials around sensitive underground utilities. The hydro excavation component uses pressurized water to break up the soil, creating a slurry that is then extracted by the vacuum system into a debris tank. This process allows for accurate excavation without damaging nearby pipes, cables, or other underground infrastructure. Hydro and vacuum excavators are particularly valuable in projects where traditional mechanical excavation methods may pose a risk to the integrity of underground utilities or when precision and minimal disturbance are essential.
