### Report Overview

Hydrographic Survey Vessels are specialized maritime platforms designed for the purpose of conducting hydrographic surveys, which involve the collection and analysis of data related to the physical characteristics of underwater terrain, including depth, shape, and composition of the seafloor. These vessels are equipped with advanced surveying instruments such as multibeam echo sounders, side-scan sonars, and sub-bottom profilers to gather precise bathymetric and oceanographic data. The data collected is crucial for various applications such as navigation safety, coastal zone management, marine resource exploration, and environmental monitoring.
