Report Overview

Coated intermittent catheters were developed with the intent to reduce long term complications of the urethra due to catheterization. There are catheters coated with ready-to-use solutions, hydrophilic coatings, gel on the catheter surface, or gel inside the wrapping. Coated catheters are designed for single-use and allow for smooth insertion and removal, lowering the chances of urethral mucosal irritation. Hydrophilic catheters have polymer coating, which makes the catheter surface slippery just by soaking them in water right before use.
