Report Overview

A hydrophobic film is a thin, transparent protective layer designed to repel water and other liquids, thus preventing them from penetrating or adhering to surfaces. Made from materials such as polyethylene or other polymers, this film is engineered with a water-repelling surface treatment that creates a barrier against moisture. It is commonly used in various applications, including electronics protection, automotive coatings, and architectural glazing, to enhance durability, prevent water damage, and maintain aesthetic appeal. The hydrophobic properties of the film can also help in reducing the formation of water stains and simplifying cleaning processes, as water droplets bead up and roll off the surface, carrying away dirt and debris.
