Report Overview

Hydrophobic Non-Woven Fabric is a type of synthetic material engineered with water-repellent properties. It is created through a process that does not involve weaving, instead utilizing techniques such as melting, air laying, or spunbonding to bond the fibers together. This fabric is characterized by its ability to repel water, making it suitable for applications where water resistance is crucial. It is often used in various industries, including medical, automotive, construction, and agriculture, for applications such as protective clothing, waterproofing, and filtration. The hydrophobic nature of the fabric is achieved through the incorporation of specific chemicals or by treating the fabric with substances that create a barrier against water absorption, while still maintaining breathability and other desired properties.
