Report Overview

Hydrotalcite PVC Stabilizer is a chemical additive used in the manufacturing of polyvinyl chloride (PVC) products. It is a type of stabilizer that helps to prevent the degradation of PVC when exposed to heat, light, and other environmental factors. This product is derived from hydrotalcite, a naturally occurring mineral with a layered structure that can accommodate various anions and cations. In PVC applications, hydrotalcite acts as a heat stabilizer, providing thermal stability and resistance to discoloration. It is particularly effective in PVC formulations that require low levels of heavy metal stabilizers, such as lead or cadmium, due to environmental and health concerns. Hydrotalcite PVC Stabilizer is valued for its ability to maintain the physical properties and appearance of PVC products over time, making it a critical component in the production of durable and long-lasting PVC goods.
