Abstracts

An IaaS platform is a type of cloud computing solution that delivers on-demand data storage and network resources over the internet. Most IaaS solutions offer the pay-as-you-go model, where businesses can use and pay for resources as needed. In an IaaS setup, end user organizations can't control or manage the underlying cloud infrastructure, but they have complete control over their data, networks, operating systems, and any other deployed applications. Some solutions also offer users control over the selection of networking components, such as host-based firewalls. Some of the future market trends of IaaS Solutions are: The increasing adoption of generative AI, which uses vast amounts of cloud computing power to create new content, code, and data. Gen AI is more than a form of technology infrastructure. It's part of a long-term trend of the cloud influencing the transformation of business functions. Gen AI has subtly changed the balance of power between cloud and non-cloud infrastructure providers, as more and more organizations are creating workloads that require cloud-based, gen-AI services. The shift from CAPEX model to OPEX model, which allows organizations to reduce capital expenditures and optimize costs by paying only for the resources they consume. IaaS helps eliminate much of the complexity and costs associated with building and maintaining physical infrastructure in an on-premises data center. The CSP is responsible for managing and maintaining the infrastructure, so you can concentrate on installing, configuring, and managing software and keeping your data secure. The growing need to simplify solutions for backup, recovery, and disaster recovery, which are essential for ensuring business continuity and data protection. IaaS provides a scalable and flexible solution for storing, backing up, and recovering data in the cloud, without the need for expensive hardware and software. IaaS also enables organizations to leverage cloud-based disaster recovery services, which can restore data and applications in minutes, rather than hours or days.

The global IaaS Solutions market size was estimated at USD 1080.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
