Report Overview

IC Substrate CCL, also known as Copper Clad Laminate, is a critical component in the manufacturing of printed circuit boards (PCBs) and integrated circuits (ICs). It is a composite material that consists of a core layer made from a glass-reinforced epoxy resin, which provides mechanical strength and dimensional stability. This core is then clad with a thin layer of copper on one or both sides, which serves as the conductive layer for electrical circuits. The copper layer is bonded to the core through a process that ensures a strong and uniform adhesion. IC Substrate CCL plays a vital role in the electronics industry as it forms the foundation for the interconnection of electronic components, enabling the transmission of electrical signals and power within devices. The quality and performance of the CCL directly impact the reliability and efficiency of the final electronic product.
