Abstracts

An IGBT (Insulated Gate Bipolar Transistor) Module Heat Dissipation Substrate is a critical component in power electronics used to manage and dissipate heat generated by IGBT modules during operation. These substrates, often made of materials with high thermal conductivity like aluminum nitride (AlN) or copper, provide a pathway for heat to be efficiently transferred away from the IGBT chips to maintain optimal operating temperatures. This prevents overheating and ensures reliable performance and longevity of the power modules. The design and material choice of the heat dissipation substrate are crucial for enhancing thermal management, improving electrical insulation, and supporting the mechanical stability of the IGBT module, which is widely used in applications such as electric vehicles, renewable energy systems, and industrial drives.
