Immersion liquid cooled optical module refers to an optical module that utilizes a liquid cooling system to dissipate heat generated during its operation. The optical module is immersed in a non-conductive coolant fluid, which absorbs the heat generated by the module, and transfers it to a radiator or heat exchanger for dissipation. This cooling method enables efficient heat removal, allowing the optical module to operate at higher power levels, higher data rates, and longer distances without the risk of overheating.

The global Immersion Liquid Cooled Optical Module market size was estimated at USD 650.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
