### Report Overview

In-Circuit Test Equipment, often abbreviated as ICT, is a type of testing technology used in the electronics manufacturing industry to verify the functionality and performance of printed circuit boards (PCBs). This equipment is designed to automatically test for shorts, opens, and other faults in the circuitry of a PCB by sending a series of electronic signals through the board. ICT systems typically interface directly with the PCB, making contact with test points on the board to simulate the behavior of the actual electronic components.
