Report Overview

Indoor CO2 Sensors are devices designed to monitor and measure the concentration of carbon dioxide (CO2) within indoor environments such as homes, offices, and commercial spaces. These sensors play a crucial role in maintaining optimal air quality and ensuring the health and comfort of occupants. They function by detecting the presence of CO2 molecules in the air and converting this information into a digital reading, which can then be displayed or integrated with other systems for further analysis or control. The primary purpose of these sensors is to alert users when CO2 levels exceed recommended thresholds, indicating a need for improved ventilation or air circulation to prevent potential health risks associated with high CO2 levels, such as drowsiness, headaches, and reduced cognitive function. Indoor CO2 Sensors are an essential tool for creating a safe and comfortable living or working environment by promoting better air quality management.
