Report Overview

Indoor Fire-Resistant Gypsum Board is a type of construction material designed for interior applications, specifically engineered to provide enhanced fire resistance. This board is made from gypsum, a soft sulfate mineral that is processed and combined with other additives to create a dense, non-combustible panel. The primary function of this product is to slow the spread of fire and smoke within a building, thereby increasing the time available for occupants to evacuate and for firefighters to respond. It is characterized by its ability to maintain structural integrity and resist heat for a prolonged period, typically exceeding standard building codes' requirements for fire resistance. The board is also known for its moisture resistance, making it suitable for use in areas prone to humidity or water exposure. It is commonly used in walls, ceilings, and partitions, offering both a decorative finish and a critical safety feature in commercial and residential construction projects.
