Abstracts

An Industrial Atmospheric Plasma System is a sophisticated technology used to modify and treat the surfaces of materials in various industrial applications. Unlike traditional plasma systems that operate under vacuum conditions, these systems function at atmospheric pressure, making them more versatile and easier to integrate into production lines. They generate plasma by ionizing a gas, such as air or nitrogen, using electrical energy, which creates reactive species capable of cleaning, activating, or coating surfaces. This process enhances adhesion properties, prepares surfaces for subsequent processing, and improves overall material performance. Commonly used in industries such as automotive, electronics, textiles, and packaging, atmospheric plasma systems are valued for their efficiency, environmental friendliness, and ability to treat a wide range of materials without the need for vacuum chambers.

The global Industrial Atmospheric Plasma System market size was estimated at USD 285.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.25% during the forecast period.
