Abstracts

The industrial automation bending system is a bending machine paired with a robot to form an automatic bending system. With the integrated robotic system, the machine is able to select the correct bend based on the part to be produced and the production volume, without operator intervention. This technology can significantly increase productivity. A press brake is a machine tool for bending metal parts and sheets up to 20 mm thick. It consists of a V-shaped or U-shaped die (depending on the desired bend shape) and a punch. The material to be bent is placed on a die and pressed by a punch, and the sheet is bent to a selected degree. Industrial automated bending systems are used in sheet metal processing and production plants in many fields, such as automotive and aerospace.

The global Industrial Automation Bending Systems market size was estimated at USD 1450.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
