Abstracts

Industrial Ceramic Carbide Turning Inserts are made from either aluminium oxide or silicon nitride. They provide excellent performance when machining hardened steel, cast iron, steel and exotics materials. They are also the most popular solution for fast metal removal on nickel-based alloys. Ceramic inserts can cost up to three times more per cutting edge compared to carbide inserts. However, the dramatic increase in cutting speeds which results in quicker cycle times mean production costs are greatly reduced.

The global Industrial Ceramic Carbide Turning Insert market size was estimated at USD 1480.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
