Abstracts

An industrial double chainstitch machine is a specialized sewing machine designed for creating double-stitched seams using a chainstitch technique, which involves interlocking two threads to form a strong, durable stitch. This machine operates with two needle threads and a single looper thread, creating a robust stitch pattern that provides added strength and flexibility, making it ideal for heavy-duty fabrics and applications. The double chainstitch machine is commonly used in the textile and apparel industries for stitching garments, denim, and other durable materials. Its ability to produce a double chain of stitches ensures that seams are both secure and resistant to unraveling, which is crucial for products subjected to stress and wear. The machine's design allows for high-speed operation and precision, contributing to both efficiency and consistent quality in large-scale manufacturing environments.

The global Industrial Double Chainstitch Machine market size was estimated at USD 187.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
