Abstracts

Hyperspectral imaging cameras are advanced imaging devices that capture detailed spectral information across a wide range of wavelengths. Unlike traditional cameras that capture images in three color channels (red, green, and blue), hyperspectral cameras capture images in hundreds or even thousands of narrow spectral bands across the electromagnetic spectrum. This enables them to detect subtle differences in spectral signatures that are not visible to the human eye.

The global Industrial Hyperspectral Imaging Camera market size was estimated at USD 285.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.35% during the forecast period.
