Report Overview

Oil Absorbent Granules are a type of sorbent material specifically designed to absorb and contain oil-based liquids. These granules are typically made from materials such as peat moss, cellulose, or synthetic polymers, which have a high affinity for oil and a low affinity for water. They are engineered to rapidly absorb oil and other hydrocarbons, while repelling water, making them highly effective in cleaning up oil spills and leaks. Oil Absorbent Granules are commonly used in industrial settings, automotive workshops, and marine environments to prevent oil contamination and protect surfaces from oil damage. They are also environmentally friendly, as they can be easily disposed of after use, reducing the environmental impact of oil spills.
