### Report Overview

An Infant Radiant Warmer with Phototherapy Lamp is a medical device designed to provide a controlled and stable environment for premature or critically ill newborns. This device combines two essential functions: maintaining the infant's body temperature and providing therapeutic light treatment. The radiant warmer features a temperature-controlled surface that helps regulate the baby's body temperature, ensuring they stay warm and comfortable. The phototherapy lamp, on the other hand, emits specific wavelengths of light that help treat jaundice, a common condition in newborns caused by high levels of bilirubin. By breaking down the bilirubin in the infant's skin, the phototherapy lamp aids in reducing the severity of jaundice and preventing complications.
