## Abstracts

An inflatable hyperbaric oxygen chamber is a medical device that provides high concentrations of oxygen to treat a variety of diseases or injuries. By providing high-pressure oxygen, the cabin allows the human body to inhale a higher concentration of oxygen, thereby increasing the solubility of oxygen in the blood, promoting blood circulation and oxygen delivery, improving the body's immunity, and promoting wound healing. Inflatable hyperbaric oxygen chambers usually consist of a special airtight chamber, a pressure control system and an oxygen supply system. After the patient enters the closed cabin, the system will gradually increase the internal oxygen concentration and air pressure to reach the high oxygen pressure environment required for treatment. This treatment is widely used to relieve pain, promote wound healing, treat burn injuries, radiation damage, poisoning and many other diseases.

The global Inflatable Hyperbaric Oxygen Chamber market size was estimated at USD 38.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
