Report Overview

Infrared Fluorescent Powder is a specialized type of luminescent material that exhibits fluorescence when exposed to infrared radiation, typically beyond the visible light spectrum. This product is engineered to absorb infrared light and re-emit it as visible light, often in a specific color. It is commonly used in a variety of applications where detection or visualization under infrared light is required. Such applications include security markers, anti-counterfeiting measures, and forensic analysis. The powder can be incorporated into various substrates like plastics, inks, and coatings to create products that are only visible under infrared light, enhancing their utility in covert operations or specialized industries. The effectiveness of Infrared Fluorescent Powder lies in its ability to convert invisible infrared energy into a visible signal, providing a distinct advantage in scenarios where stealth and detection are paramount.
