Report Overview

An Inorganic Carbon Analyzer is a scientific instrument designed to measure the concentration of inorganic carbon (IC) in various samples, such as water, soil, and geological materials. It plays a crucial role in environmental monitoring, geochemical research, and industrial processes. The device operates by converting inorganic carbon into carbon dioxide (CO₂) through a process called acidification, which is then detected and quantified using advanced analytical techniques like non-dispersive infrared (NDIR) or photoacoustic spectroscopy. The analyzer provides precise and accurate measurements of IC, which is essential for understanding carbon cycling in ecosystems, assessing the impact of anthropogenic activities on carbon storage, and optimizing processes in industries such as beverage production, where the control of carbonation is critical.
