### Report Overview

The integrated brake-by-wire system is an advanced automotive braking technology that replaces traditional hydraulic braking systems with electronic control units (ECUs), sensors, and actuators to manage braking force distribution. By eliminating hydraulic components, the system enhances responsiveness, reduces weight, and improves energy efficiency, particularly in hybrid and electric vehicles where regenerative braking can be optimized. It relies on electronic signals from the driver's input and vehicle dynamics sensors to modulate braking force, enabling features like adaptive braking, collision avoidance, and seamless integration with advanced driver-assistance systems (ADAS). The technology represents a shift toward fully electrified vehicle architectures, aligning with the broader automotive industry's push for automation, sustainability, and performance optimization.
