Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Integrated Circuit Etching Gas competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The etching process requires a chemical reaction between the electron gas and the etched material. The etching process requires a large amount of fluorocarbon gases, such as hexafluoroethane, carbon tetrafluoride, trifluoromethane, octafluorocyclobutane, octafluorobutane, etc. The etched gas undergoes a chemical reaction with the etched material, resulting in the elimination of the etched material. In the etching process of wafer manufacturing, especially in the dry etching process, in order to achieve directional etching, it is necessary to use electronic special gases to form plasma under ionization conditions. The plasma undergoes chemical or physical reactions with the etched material to remove a portion of the etched material. Different electron gases are also used for reactions in different etching targets. The commonly used etching gases include fluorinated and chlorinated gases, as well as oxygen-containing gases and some rare gases. The key manufacturers of Etching Gas include Linde, SK Materials, Kanto Denka Kogyo, PERIC Special Gases, Merck (Versum Materials), Showa Denko, etc. Linde is the world's largest player, with about 14% of the market. Asia Pacific is the largest market, accounting for 74% of the global market. The Asia-Pacific region will maintain its position in the future. In terms of product, it is divided into Fluorine Containing Gas, Chlorine Containing Gas, Oxygen Containing Gas and others. Fluorine Containing Gas is the major product, accounting for about 60%.

The global Integrated Circuit Etching Gas market size was estimated at USD 821.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
