Abstracts

The intelligent electric floor heating system uses flexible heating cables buried in the floor, and is controlled by a precise electronic constant temperature controller to heat the surface of the ground and emit 8~13um far-infrared rays, which are 2mm deep on the human skin. A heating method in which the 'hot spot' sensor generates stimulation to make people feel warm. It uses electricity as the energy source, heating cable as the heating body, converts 90% of the electrical energy into heat energy, and uses the ground inside the building as the cooling surface to heat the surrounding air through convective heat exchange.

The global Intelligent Electric Floor Heating System market size was estimated at USD 2850.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.45% during the forecast period.
