An automated personal assistant or an Intelligent Personal Assistant is a mobile software agent that can perform tasks, or services, on behalf of an individual based on a combination of user input, location awareness, and the ability to access information from a variety of online sources (such as weather conditions, traffic congestion, news, stock prices, user schedules, retail prices, etc.). There are two types of automated personal assistants: intelligent automated assistants (for example, Apple's Siri and Tronton's Cluzee), which perform concierge-type tasks (e.g., making dinner reservations, purchasing event tickets, making travel arrangements) or provide information based on voice input or commands; and smart personal agents, which automatically perform management or data-handling tasks based on online information and events often without user initiation or interaction.
