Abstracts

Intent-based networking (IBN) is a systematic approach to bind infrastructure management and business intent. It is a network management approach in which artificial intelligence (AI) and machine learning (ML) play a major role by automating all the organizational tasks which can be applied across the network i.e., it helps in accomplishing a specific purpose or intent. IBN technology enables organizations to define their network policies and objectives in more abstract terms, such as desired application performance, security requirements, or compliance goals. The network infrastructure then interprets these intentions and automatically adjusts its configuration and behavior to meet them.

The global Intent Based Networking Ibn Technology market size was estimated at USD 5000.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
