Abstracts

An internal developer platform is a collection of tools and resources provided within an organization to developers and engineers to enable them to build, test, and deploy applications and services within the organization. The purpose of the internal developer platform is to provide a unified development environment and workflow to help development teams collaborate and develop software more efficiently. 2024 is the year of the internal developer portal. Nearly 85% of companies surveyed have already implemented an internal developer portal or plan to do so in the next year. Almost all respondents (99%) said they have already started using platform engineering in their enterprise, with 53% saying they started using platform engineering in the past year. This means that enterprises are committed to using developer portals in addition to platform engineering. 56% of companies plan to implement platform engineering in 2024, and 44% already have one or plan to add an internal developer portal in 2024. 56% said the main motivation for building a developer portal is to avoid duplication of work, and 35% use spreadsheets to manage microservices data as a "portal". 34% said they use developer portals as the main tool to improve engineering quality and compliance, and 70% said that due to the lack of platform engineering, developers spend 3-4 hours a day on non-core work. Essentially, an IDP is a platform that simplifies the software development process by providing developers with a range of tools and resources. It's akin to a builder's toolkit: Each tool has a specific purpose, and when combined together, the builder (or in this case, the developer) can efficiently produce a powerful product.
