Abstracts

Internal thread wire thread inserts are mechanical devices used to strengthen and repair tapped holes in various materials, especially metals. These inserts consist of a coiled wire with threads that match the specific internal threads of the hole. They are typically made of materials like stainless steel or phosphor bronze and are designed to provide a durable and reliable thread reinforcement. By inserting the coil into the damaged or worn-out threaded hole, a new, stronger thread is created, allowing for the secure fastening of screws or bolts. Internal thread wire thread inserts are commonly utilized in industries like aerospace, automotive, and manufacturing, where thread strength and reliability are crucial for maintaining structural integrity and preventing thread stripping or loosening.

The global Internal Thread Wire Thread Inserts market size was estimated at USD 165.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
