Report Overview

Inulin-type fructans are a group of naturally occurring polysaccharides composed of fructose chains with a terminal glucose molecule, primarily sourced from chicory root, agave, and Jerusalem artichoke. They function as soluble dietary fibers, exhibiting prebiotic properties that promote gut health by selectively stimulating beneficial bacteria such as Bifidobacteria and Lactobacilli. Due to their low caloric content, resistance to digestion in the upper gastrointestinal tract, and ability to enhance mineral absorption, inulin-type fructans are widely used in functional foods, dietary supplements, and pharmaceutical formulations. Their applications span sugar and fat replacement in processed foods, texture modification, and health-focused product development, making them a versatile ingredient in the food and wellness industries. The market for inulin-type fructans is expanding due to rising consumer awareness of digestive health, increasing demand for natural and clean-label ingredients, and growing applications in weight management and diabetic-friendly products.
