### Report Overview

Iodine incise drapes are specialized surgical adhesive films impregnated with iodine, designed to create a sterile barrier over the surgical site while continuously releasing antimicrobial agents to reduce the risk of surgical site infections (SSIs). These drapes adhere securely to the skin, providing a clear, durable surface that minimizes bacterial migration and maintains sterility during procedures. Commonly used in orthopedic, cardiovascular, and general surgeries, iodine incise drapes combine the benefits of traditional surgical draping with sustained iodine-based antiseptics, making them a critical tool in infection control protocols within operating rooms. The market for these drapes is driven by increasing surgical volumes, heightened awareness of SSI prevention, and advancements in adhesive technologies that enhance efficacy and patient safety.
