### Report Overview

Iodoform powder, a yellow crystalline compound with the chemical formula  $\text{CHI}_3$ , is primarily used as an antiseptic and disinfectant in medical and pharmaceutical applications due to its antimicrobial properties. Historically, it was widely employed in wound dressings and dental procedures, though its usage has declined in favor of less toxic alternatives. Despite this, it remains relevant in niche applications, including veterinary medicine and as a reagent in chemical synthesis. The market for iodoform powder is influenced by demand from healthcare sectors in developing regions, where cost-effective antiseptics are prioritized, as well as by specialized industrial uses. Regulatory constraints on iodine-based products in some regions may limit growth, while increasing awareness of infection control in emerging markets could sustain steady demand.
