Report Overview

An IQF (Individually Quick Frozen) Impingement Freezer is a specialized industrial freezer used in the food processing industry for rapidly freezing individual food items. This type of freezer utilizes a high-velocity air impingement system, where air is forced through small nozzles onto the food products, creating a thin layer of air that rapidly absorbs heat from the surface of the food. This process ensures uniform and quick freezing, which helps maintain the quality, texture, and nutritional value of the food items. The IQF Impingement Freezer is particularly effective for freezing products that are sensitive to freezing damage, such as fruits, vegetables, and seafood, and is also used for applications where individual product separation is required after freezing, such as in ready meals or portion-controlled packaging.
