Report Overview

Iridium on Carbon Catalyst is a chemical product that combines the precious metal iridium with carbon as a support material to create a highly effective catalyst. This catalyst is designed to facilitate various chemical reactions, particularly those involving hydrogenation or oxidation processes. The iridium, which is a member of the platinum group metals, is known for its exceptional catalytic properties, high melting point, and resistance to corrosion. When dispersed on a carbon support, it enhances the surface area available for reactions, thereby increasing the catalyst's activity and selectivity. This product is widely used in the pharmaceutical, chemical, and petrochemical industries for applications such as the production of fine chemicals, the synthesis of pharmaceutical intermediates, and the purification of various compounds. The combination of iridium's catalytic prowess with the porous structure of carbon results in a robust and efficient catalyst that can withstand harsh reaction conditions and be easily recovered and reused.
