Report Overview

The isolated self-rescuer (ISR) is a portable respiratory protection device designed to provide breathable air in emergency situations, particularly in environments with toxic gases or oxygen deficiency, such as mining, industrial settings, or confined spaces. It operates independently of external air sources, typically using a chemical oxygen generator or compressed oxygen cylinder to supply oxygen while filtering harmful contaminants. ISRs are crucial for worker safety in high-risk industries, offering a temporary escape solution (usually 30-60 minutes) until users reach a safe area.
