Abstracts

Isostatic pressure isotropic graphite is a kind of graphite material that crystals are disorderly arranged while having an isotropic structure. Isotropic graphite is a ultra-fine grain graphite used for applications where the mechanical properties of other fine grain graphite are inadequate. Its name is derived from the method of production: During the forming process the material is isostatically pressed i.e. with equal pressure from every side. Therefore the material shows typically an isotropic property behavior. Nowadays Isotropic Graphite is quite popular material that is in great demand in the photovoltaic industry and is indispensable in semiconductors production.

The global Isostatic Pressure Isotropic Graphite market size was estimated at USD 850.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.45% during the forecast period.
