### Report Overview

Knife electrodes are specialized medical devices used in various surgical procedures, particularly in electrosurgery. They are designed as elongated, thin, and sharp-edged instruments that resemble a knife, hence the name. These electrodes are typically made from stainless steel or other biocompatible metals and are insulated along their shaft, except for the exposed cutting edge. The primary function of knife electrodes is to cut, dissect, or coagulate tissue while minimizing damage to surrounding healthy tissue. They are connected to an electrosurgical unit, which provides the necessary electrical current for cutting and coagulation. Knife electrodes are commonly used in procedures such as laparoscopic surgery, where precision and minimal tissue damage are crucial. The design allows for better control and accuracy during surgery, ensuring patient safety and optimal outcomes.
